## **IServ an Nextcloud anbinden (LDAP)**

Zunächst muss man auf dem IServ den LDAP-Zugriff vorbereiten. Das mitgelieferte Plugin von Nextcloud schreibt leider ungeeignete Daten in die Nextcloud-Datenbank, so dass man z.B. mit phpmyadmin manuell Werte in die Datenbank schreiben muss.

Die relevanten Einträge befinden sich in der Tabelle *oc\_appconfig* und besitzen in der Spalte *appid* den Eintrag *user Idap*.
